Splunk® Add-on for Microsoft Windows DNS
Install and use the Splunk Add-on for Windows DNS 1.0.1

About the Splunk Add-on for Windows DNS

Generated: 3/12/2019 6:33 am
The Splunk Add-on for Windows DNS version 1.0.1 is not supported when installed alongside the Splunk Add-on for Windows version 6.0.0. The Splunk Add-on for Windows version 6.0.0 includes the Splunk Add-on for Windows DNS and the Splunk Add-on for Microsoft Active Directory.

The Splunk Add-on for Windows DNS reached its End of Life (EoL) on February 18, 2019.

**About the Splunk Add-on for Windows DNS**

**Version** 1.0.1
**Vendor Products** Microsoft Windows DNS Server

Visible No. This add-on does not contain any views.

The Splunk Add-on for Windows DNS lets you collect Domain Name Server debug logs from Windows hosts that run Windows DNS Server.

Windows DNS Server does not log certain events by default, and the Splunk Add-on for Windows DNS requires that you enable debug logging.

After the Splunk platform indexes the events, you can analyze the data.

This add-on provides the inputs and **CIM**-compatible knowledge to use with other Splunk apps, such as the Splunk Apps for Microsoft Exchange and Windows Infrastructure.
