Add a user to a role with Splunk Web

You can add a user to a default role or to a custom role you create yourself. For more information, see "About role-based user access."

To add a user or users to a role with Splunk Web:

1. Click Settings > Access Control > Access Controls in the main menu.

2. Click Users.

3. Edit an existing user or create a new one.

4. Choose which role to map to from the Role list. Any custom roles you have created in authorize.conf will be listed here.
